Rocuronium: 10 mg/ml in 5 ml vial	2				X

- ALS Fly Cars are to carry what is on the minimum required list.
- Transport ambulances are minimally required to carry what is on the required list, most items should be in a portable bag (enabling the meds/equipment to be brought to the patient). Recommended items can be carried in the ambulance or in a portable bag based on the agency's needs for their patient population.
- A current NYS Department of Health Limited-Service Registration is required for glucometry.
- Dial a flow or gravity IV set training should be done per manufacturer recommendations.
- We realize that all pharmacies or medical suppliers may offer medications in different concentrations and that is ok if you have a comparable milligram amount to what is listed.

Approved on August 26, 2024
